What is gPanel[®]?

gPanel[®] by Promevo is an exclusive Google Workspace management and reporting solution.

The intuitive centralized user management and security interface delivers peace of mind with a robust suite of features.

Benefits for Our Clients

- Provides our customers time savings through Advanced User Administration and Admin Delegation, Automated Onboarding/Decommissioning Workflows
- Enhanced visibility through Unique Customizable Reporting
- Drives consistency in branding
- Operational efficiency gains through additional role delegation (Google Workspace Admins, Security Analysts, HR, Learning & Development, Marketing, First-line Managers)
- Superior Domain Security for their organization through granular security controls

What Our Customers Are Saying

Its presentation of data across Google Workspace is better than native tooling. There are various tasks where it is just faster to get answers via gPanel.

I can get in, and get out quickly and know exactly where all the controls are. ”

It makes managing individual user data easier. Especially info that requires you to log in as the user like vacation and autoresponders.

What's New?

- Rules Engine ongoing
 - August 13 Office Hours Session
 - See May session on-demand for a preview

We report on all of this on our release notes so make sure you're signed up for that!

There will be new features coming soon, so stay tuned for our future Office Hour webinars!

Automation in gPanel

- **Drive Sweep**
 - Ability to change ownership of a folder, and all its contents, to the owner of the Drive Sweep folder
- **Contact Sync**
 - Select a source contact label and recreate it under another user's contacts
- **Signature Templates**
 - Create custom Gmail signature templates

Use Cases and Examples

Drive Sweep

An offboarded user's drive data was transferred to their manager. Within the users drive are numerous folders and files owned by different people. A drive sweep folder can be created in the manager's drive and any folder placed in it, and all of its contents, will change ownership to the manager.

Signature Template

Your marketing team has asked that their signatures be updated to include images/links to compliment their new advertising campaign. You can update their group's signature template from gPanel.

Contact Sync

Your research team has collected the contact information of several key project collaborators. You are tasked with sharing these contacts with your development team. The contact sync module allows you to select this contact label and recreate it in your target users contacts.

Use Cases and Examples

Detect and Respond to Malicious Drive Activity

A Rule is triggered when a user deletes a number of documents within a time frame. The Rule can respond by changing taking an action to temporarily limit the users access.

Fully configure a new user when they are added to Workspace

A Rule is triggered when a user is added into Workspace. Based on their domain or OU a Policy can be executed that configures their Shares, Groups, and Settings.

Notify a watch Space when an excessive Admin event occurs

A Rule is triggered when an Admin event occurs based within a certain OU or Domain and has occurred more than an allowed number of times within a time period. The Rule then notifies a Chat space with an alert and temporarily suspends the performing user.

Apply a Group Template when certain user create Groups

A Rule is triggered when a Group is created based on certain OU or Domain. The Rule then applies a Group template to ensure the group is private and has the correct settings.
